Elementary School, 730
Glenwood Road, Glendale, CA

Dates: Wed., Feb. 27th, 2019

Time: 3:30 – 5:30pm

Cost: FREE, for Glendale
Educators, grade levels 3-12

Contact: info@rahus.org or
707-829-3154

Instructor: Tor Allen,
*Founder and Director of
The Rahun Institute and
Solar Schoolhouse Program.*

Since 2000, the Solar Schoolhouse Program has hosted over 1000 educators in professional development workshops, providing curriculum and project materials for exploring solar energy in a k12 setting.

The Solar Carnival is coming to your school! Create a new classroom project using solar cells, motors, fans, buzzers and music using only cardboard, tape and hot glue. Explore how your students can design and construct a mini Solar Carnival which consists of kinetic rides and carnival attractions all powered by the sun. Your students will apply their knowledge of circuits, solar and utilize some hands on building skills while making something magical! In this workshop you will create one “ride” and learn tips on introducing this project to your class. For a sneak peak at a carnival: www.solarschoolhouse.org/carnival

Each participating **school** at the workshop is eligible to receive a **FREE Solar Cell Classroom Set and Solar Carnival Project materials**, along with the Your Solar Home Student Guides, and additional accessories for sharing with your classroom. Students are encouraged to share their creations at the annual **Glendale Solar Discover Faire** on April 13th @ Roosevelt Middle School.

Lessons & activities are NGSS aligned.

Thanks to our generous sponsors, we’re able to offer this workshop and classroom materials **FREE** to educators, though an RSVP is required due to limited space. Follow the link below to register for the workshop.
